

Reggie Gian Escobar

Senior Full Stack Engineer

Taipei, Taiwan · reggie.escobar94@gmail.com · [linkedin.com/in/reggie-escobar](https://www.linkedin.com/in/reggie-escobar) · github.com/prodoxx

EXPERIENCE

Senior Backend Engineer · Propertyfi AI

2025 – 2026

Property data SaaS · Remote, Scottsdale AZ

- Led a team of 4 engineers and owned backend, distributed systems, and AI infrastructure across AWS and GCP, holding 99.9% uptime over terabytes of property data.
- Architected high throughput Temporal pipelines with concurrency controls, retry, and idempotency that produced 8,000+ engaged leads from raw data; ran a full AWS to GCP migration in 2 weeks with zero downtime and zero data loss.

Senior Full Stack Engineer · Central

2024

Payroll SaaS startup · Remote, San Francisco CA

- Owned full stack features on a 10 engineer team and partnered with product to translate business goals into pragmatic technical solutions.
- Shipped Plaid integration that modernized US bank transfers and unlocked a new international contractor payment rail the platform did not previously support.
- Designed Temporal workflows with retry and idempotency on every money movement path, which ultimately supported millions of dollars per month in payroll throughput.

Senior Software Engineer II · Appier

2022 – 2024

Aideal team, AI for e-commerce · Remote, Taipei

- Built analytics dashboards backed by petabyte scale event data, used by hundreds of enterprise customers and an internal team of 6 data scientists, 3 product managers, and 5 marketing analysts to make sense of e-commerce behavioral data and configure Aideal, an AI product that predicts user behavior on e-commerce websites.
- Designed Airflow, Kafka, and Spark pipelines for high throughput event ingestion, parallelism, and concurrent processing across petabyte scale data feeding the dashboards.
- Cut analytics dashboard load time from 20.56s to 602ms (~97% reduction) through full stack profiling of frontend rendering, async resolvers, and database queries; mentored mid and junior engineers.

Full Stack Engineer · Ternio (Unbanked)

2020 – 2021

Fintech startup · Remote, Atlanta GA

- On a 5 engineer team, integrated Plaid and Evolve Bank to launch new credit card and bank deposit funding flows (millions of dollars per month in new transaction volume); shipped a cashback program and a staking feature that grew company revenue by locking customer balances into the platform.

Product Manager · Symphony Communications

2019

Enterprise messaging platform · On-site, Palo Alto CA

- Led scaling initiatives on the Platform team for an enterprise messaging product serving global financial institutions; coordinated across multiple engineering teams and partnered directly with C-suite executives on technical roadmap and capacity planning.

Senior Software Engineer · Belize Social Security Board

2015 – 2016

On-site, Belmopan Belize

EDUCATION

MBA, National Tsinghua University · 2018

BSc. in Computer Science, University of Belize · 2016

SKILLS

Primary Stack TypeScript, Node.js, React, Next.js, PostgreSQL, AWS, Docker, Terraform

Also fluent in Python, Go, Ruby, Vue, Nuxt, Astro, GraphQL, Redis, Temporal, Kubernetes, GCP

Specialties Distributed systems, API first design, third party integrations, payments and commerce, headless architectures

PROJECTS

DecodeThisText · [decodethistext.com](https://github.com/prodoxx/decodethistext.com)

2026 – Present

- Took a full stack AI SaaS from zero to production solo using Astro, TypeScript, PostgreSQL, Prisma, Node.js, and OpenRouter; conversion optimized funnel with Paddle billing now producing \$500 MRR and ~1,400 daily users.

Danbing AI · [danbing.ai](https://github.com/prodoxx/danbing.ai)

2025 – Present

- Designed, built, and shipped an AI powered learning platform from scratch using Next.js, TypeScript, PostgreSQL, MongoDB, OpenRouter for LLM inference, and Lemon Squeezy (Stripe) for billing.

claw-design · [github](https://github.com/prodoxx/claw-design) · [npm](https://www.npmjs.com/package/claw-design)

Open Source

- Published an Electron app on npm that gives Claude Code visual context for frontend editing across React, Vue, Next.js, Nuxt, Astro, Svelte, Angular, and plain HTML.
